

HPP approval procedures including construction permits for new HPP is essential - until those Standards are prepared and introduced. Thus all existing-, but not implemented yet, or future projects shall be brought into conformity with these Standards and only then shall be approved for further development.

We also believe that prior to the preparation and implementation of National standards - a nationwide programme for ecological impact assessment of all existing HPP should be carried out - to get a clear picture of all the benefits and damage they produce, in order to draw the necessary conclusions for the future.

We have seen so many mistakes in the existing HPP - that must not be multiplied in the future 700 HPP, by any means.

Thank you for your kind understanding and cooperation.

"Nature has all the time in the world, we do not".
